

# OpTex XLAnamorphic Adapter for Canon XL-1/S

This *zoom through* Anamorphic Adapter offers XL-1/S users wide-screen recording while maintaining optical quality.

Designed for use with the Canon XL16X Manual lens, the adapter optically squeezes a 16:9 image onto the 4:3 chips used in the camera. Due to the constraints of the optics, a mechanical zoom stop is provided to limit the minimum focal length to 12mm. The zoom through capability covers from 12mm to 84mm focal lengths.

The system comprises the Adapter optic itself, a support ring, the zoom stop and a system support bracket allowing the whole assembly to be balanced easily on a fluid tripod head.

Product Code: OTDVXLANA

The system can also be used with the XL16X Autofocus lens, but cut-off will occur at wider angles.

The XLAnamorphic can also be ordered with a Light Weight Support system instead of the system support bracket, to allow sunshades and other accessories to be used in conjunction with the adapter (Product Code: OTDVXLANALWS)

*Image left shows the XLAnamorphic system on a light weight support with an AC DV-Sunshade*
